

QuickStep, integrated stepper motor MIS34 up to 9 Nm

The Quickstep series of stepper motors with integrated electronics represents a major step forward. The stepper motor, encoder, driver, controller, indexer are built-into the motor so they form a closed unit with high IP protection. The integrated motor provides easy setup, programming, installation and use.

The advantages of this solution are:

- Compact. Does not take up space in cabinet.
- De-central intelligence. PLC built-in.
- Simple installation. No cable between motor and driver.
- EMC safe. Switching noise remains in the motor.
- Low cost compared to step or servomotor with separate driver.

The new integrated stepper motor offer RS485 and CANopen serial interface and programmable motion controller. Wireless or Industrial Ethernet are optional. All the necessary electronics in a stepper system are integrated in the motor itself. The newest technology have been used to obtain an incredibly high step resolution of 409600 step/revolution resulting in unsurpassed smoothness and silent running. MIS340 with 3Nm is only 95 mm (3,74") long and MIS342

with 9Nm only 155mm (6,14") and it is therefore the shortest motor in the world with built-in controller.

The motor contains everything needed to solve a modern control task as stand-alone or controlled from a PLC or PC. 8 I/O points can be individually configured to digital input, digital output or analogue input. Modbus RTU or RS485 interface provide easy connections to a PLC or HMI. An ActiveX/OCX driver is available to make interfacing to LabView, Excel, VB or other Windows-programs simple. The MAC motor standard protocol enables MAC motors and QuickStep motors and SMC85 controllers to be connected on the same RS485 bus with up to 254 axes.

- Shortest length in the industry only 95 mm for 3 Nm
- Resolution up to 409600 step/rev equal to 2048 microsteps per fullstep.
- Velocity precision 0.01 RPM.
- Acceleration precision 1 RPM/sec.
- Built-in PLC with 8 I/O: each DI or DO 24V or 0-5V (12bit) analogue input with advanced input filtering.
- RS485 up to 921 kbit and Modbus RTU.
- RS422 and RS485 for encoder I/O and connection to external HMI or PLC

- Point-to-point or multiaxis operation up to 254 axes on the same RS485 bus
- CANbus with CANopen DSP402 and DS301 are under development
- Pulse/Direction mode for electronic gearing
- High speed position capture
- Wide Supply range from 12-80 VDC delivering high torque at high speed
- Motor current 0-9 Amp RMS, 12.6 Amp Peak
- Dual supply maintain position values etc in emergency-stop situations
- ActiveX / OCX driver available as well as MacTalk and MODBUS protocol
- Powerful graphic programming with +/- calculations and advanced functions
- All connections with M12 connectors
- Option for double shaft and encoder single or multi turn without external battery
- Optional Industrial Ethernet Profinet, EthernetIP, Ethercat, MODBUS TCP and Powerlink.

The PCB with stepper motor controller as used inside the motor is also available as type no. SMC85.

Flange size is 86x86 mm which corresponds to the NEMA34 standard and shaft diameter can be either 9.53 mm or 14 mm with key depending on type. MIS340 is also available with hollow shaft $\varnothing$ 12 mm.

Interface possibilities

Industrial Ethernet:

Industrial Ethernet are the new way to control motors and more and more PLC manufactures have it built-in. The benefit for Industrial Ethernet are the worldwide acceptance from many companies like Beckhoff (Ether-CAT), Siemens (Profinet), Rockwell (EtherNet/IP), B&R (Powerlink) but also Modbus TCP and Sercos III are known. It offer very high response time and 100Mbit communications speed.

Wireless :

Bluetooth, WLAN, IEEE802.15.4 and Zigbee wireless module. For many applications, wireless communications is superior to cabled solutions. Eg for handheld remote control, battery operated trucks or flying machine to replace slip rings. No more broken cables or loose connections. Cost savings during installation and maintenance. Easier to move around and change equipment. Distributed intelligence when it is best. Control your motor from a mobile device like iPad

CAN Open:

CANopen can be used in together with RS485 communication and PLC function. CAN Open slave module with baudrate up to 1Mbit. CANopen DS301 V3.0 and DSP 402 V2.0. All registers of the in the motor can be read and written Notice that CANopen only are available on the Q9 version. Devicenet and Profibus are under development.

SSI encoder / RS422 :

An external encoder with SSI interface can be connected to a special dedicated SSI connector. Via the built-in PLC can 2 outputs in the connector be activated to make a Zero setting of the encoder and change counting direction. Power 24VDC for the encoder are also available so the encoder can be connected directly to 1pcs M12 connector without any need for external wire or power supply. The SSI connector contain 2 RS422 ports that can be used for other purposes like pulse direction or highspeed serial interface to external equipment. Please contact JVL for further details.

System and Feature Overview

Interface and operation mode

Positioning and Velocity Mode

In this mode the QuickStep motor positions the motor via commands sent over the serial interface. Various operating parameters can be changed continuously while the motor is running. This mode of operation is used primarily in systems where the Controller is permanently connected to a PC/PLC via the interface through MACTalk or MODBUS protokol. This mode is also well suited for setting up and testing systems. The mode is also used when programming is made.

Gear Mode

In this mode the QuickStep motor functions as in a step motor driver. The motor moves one step each time a voltage pulse is applied to the step-pulse input. Velocity, acceleration and deceleration are determined by the external frequency, but can be limited and controlled by the QuickStep motor. In addition, the QuickStep motor also provides a facility for electronic gearing at a keyed-in ratio. PLC program and other functions can run simultaneously monitoring.

PLC mode

Motor have built-in PLC with 8 IOA that individual can be configured to 24VDC digital input, output or analogue input. Eg can IO be configured as 5 inputs, 2 outputs and 1 analogue input. PLC program is made on the PC with MACTALK software and downloaded to the motor and stored in flash memory. Additional are there a RS422 channel that can be used for external encoder in or output, pulse/directions signal or for other serial data purposes like SSI. Programming are made with JVL icon command toolbox where all kind of program can be made fast and efficient. You don't need to be PLC or high level programmer. Programming are done by selecting icons and in a intuitive manner so programming only take a few hours.

Positioning/Speed Control version

MacTalk introduction

The MacTalk software is the main interface for setting up the QuickStep motor for a specific application. The program offers the following features:

- Choice of the operating mode of the QuickStep motor.
- Changing main parameters such as speed, motor current, zero search

type, etc.

- Monitoring the actual motor parameters in real time, such as supply voltage, input status, etc.
- Changing protection limits such as position limits.
- Saving all current parameters to disc.
- Restoring all parameters from disc.
- Saving all parameters permanently

in the motor.

- Updating the motor firmware or MacTalk software from the internet or a file.

The main window of the program changes according to the selected mode, thus only showing the relevant parameters for operation in the selected mode.

Command toolbox description

The toolbox used for the programming covers 18 different command types. The idea for the commands – is to have an easy access to the most common functions in the motor. The button "Set register in the QuickStep motor" or "Wait for a register value before continuing" gives direct access to +50 registers down in the basic QuickStep motor such as the gear ratio or the actual torque register. A calculator with +, -, *, / can manipulate with all registers.

In total this gives a very power full programming tool since >95% of a typical program can be build using the simple command icons and the last part is obtained by accessing the basic motor registers directly.

Below is a short description of all 18 command icons.

Quickstep and MAC motor in an RS485 or CANbus network
